

**The following exercises are taken from page 8:**

**Exercise 1.1:** Modify the echo program to also print `os.Args[0]`, the name of the command that invoked it.

**Exercise 1.2:** Modify the echo program to print the index and value of each of its arguments, one per line.

**Exercise 1.3:** Experiment to measure the difference in running time between the potentially inefficient versions and the one that uses `strings.Join`. (Time package introduced in section 1.6 page 17).
